

ANNOUNCING THE NEXT GENERATION OF PILKINGTON K GLASS™

We are delighted to announce the launch of Pilkington **K Glass™ S**, our new soft-coat high performance low-emissivity glass enabling you to benefit from an extended range of energy-efficient glass solutions from one brand. Pilkington **K Glass™** has long been the leading choice ensuring consumers save energy and money off their fuel bills and now, with this addition to our market leading range, you can also offer a soft-coated product to householders from Pilkington, the brand they know and trust.

This advance in the Pilkington **K Glass™** product range means our coated glass range offers the widest choice on the market so you can now easily find a solution for any processing technique or meet a WER performance up to and beyond band A in any framing material.

Pilkington **K Glass™ S** is a single stock sputter-coated glass which can be used in both annealed and toughened formats, with the added advantage of retaining the same thermal performance and neutral appearance. Once fabricated into an insulating glass unit (IGU) it can be used in all types of windows and in a variety of glazing applications from new build, to replacement windows in existing homes and conservatories. Pilkington **K Glass™ S** helps windows exceed Part L 2010 Regulations and provides an enhanced solution for changes expected in 2013 and 2016. When combined with Pilkington **Optiwhite™ E** in IGU, it qualifies as Pilkington **energiKare™** energy-efficient glazing and ensures a WER rating of A in all frame materials.

The product is to be introduced through selected routes to market from 1st November 2011 and will become fully available over the following months. Initially supplied from our coating plants in Europe, production of Pilkington **K Glass™ S** will move to our new coating line once it is operational in October 2012.

BFRC, CERTASS and FENSA have all certified the Pilkington **K Glass™ S** range as being interchangeable with any other low emissivity product, with equal or inferior performance, without the need to obtain new simulations.

So, whether you want the ease of use of the original hard coat or the enhanced performance of Pilkington **K Glass™ S**, the UK's favourite low-emissivity solution now suits all and Pilkington **K Glass™** is here to stay.
